Sedia Systems Piretti Table

SEDIA SYSTEMS, together with their manufacturing partner Lamm, introduces the Velo table designed by Giancarlo Piretti. Perfect for offices, classrooms, training rooms or any multi-purpose space, the Velo flip-top table features synchronized movement between the table top and legs, allowing tables to nest securely against each other. A simple one-hand movement of the flip-top mechanism smoothly moves the table to its vertical position while the legs simultaneously rotate

inward.

Designed by Giancarlo Piretti, the Velo offers the clean lines and innovative features for which Mr. Piretti is famous. The table's versatility cannot be underrated. Available in six rectangular sizes, two oval sizes and a round option, the Velo can be utilized in education, hospitality or corporate settings, as well as easily stored. Options such as a table connecting system and modesty panels further enhance the Velo's utility.

RAYNORCONTRACT introduces Nefil (above), an affordable yet aesthetically pleasing task seating line, designed to adjust to any position and economy. The main structure of the chair, a multi function ergonomic back, arm and seat support, is highlighted to give definition to the composition. The back features "smart motion", an element that gives flexibility during movement. Seat and back components are available in mesh or fabric. An aluminum structure

and base version is also offered for the executive office.

Raynorcontract's design

team also has re-engineered the Ergo Human (left) for a sleeker and highly functional product.

The main structure of the chair, a multi function ergonomic back, arm and seat have been re-designed to give more options and support.

The chrome back and base suit the executive office environment with comfort and modern styling. Seat and back are available in leather, mesh or fabric with a standard chrome base.
