V7000

sediasystems

V7000

The V7000 is a modular seating system with fixed table, designed for durable performance in high-capacity educational environments. Its metal frame provides long-term stability, and seat options in four plastic colors, beech wood or upholstery allow you to match the system to specific project and maintenance needs. The auto-lift seat mechanism keeps paths clear, and the continuous writing surface maintains a consistent line across any row, straight or curved. The system supports efficient space planning while maintaining strength and simplicity.
